## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16- 18 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 5,086,854 to Roussy.

Roussy discloses a drill pipes for rotary-vibratory drills which comprises all of the claimed structure and method of using the same. More specifically, the drill pipe is met by the drill pipes 16, 16.1, the connector member is anticipated by female and male mating portion 36,34 which are mating with drill pipes 16.1 and 16 respectively. The spaced aprt slots are anticipated by slots 60, 62 at each end of the drill pipes. The connectors are also welded to the each of the drill pipes at its end respectively (see Fig. 2 and 3). The language “the end of drill pipe is completely welded to the connector member in a ring” fails to distinguish from Fig. 2, that the end of drill pipe is completely welded to the connector member in a 360 degrees manner.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3672

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being obvious over by US Patent 5,086,854 to Roussy.

The '854 shows everything with the exception that the slots being non-parallel to the longitudinal axis of the drill pipe as being clearly shown in Fig. 2. Such a modification in the size, the shape and/or the pattern of the slots as a legal precedent is generally recognized as being within the level of ordinary skill in the art. See *In re Rose*, 105 USPQ 237 (CCPA 1955), in the standpoint of welding slotted pipe to a connector, since there is an obvious lack of functional significance that such could present any unexpected result beyond what had been taught in the prior art.
